

Dear Hiring Manager,

I am writing to express my strong interest in the Software Engineer position at Microsoft. As an experienced full-stack developer with a foundation in the MERN stack, robust skills in both web and embedded systems, and a focus on code optimization and scalable solutions, I am excited about the opportunity to make an impact at Microsoft.

During my internship at NASS Technologies, I engineered and deployed responsive web applications using Node.js, Express.js, React.js, and MongoDB, building secure APIs, reusable components, and role-based systems. My experience at Continental Automotive further strengthened my problem-solving abilities as I enhanced modularity, optimized build scripts, and participated in rigorous software validation cycles. Additionally, my work in cybersecurity taught me the importance of robust, secure systems and comprehensive documentation.

I hold an MTech in Information Security and Cyber Forensics, as well as a BE in Computer Science, both with distinction. My projects, including a secure two-factor authentication system, a dynamic MERN stack registration portal, and various web applications, show my commitment to practical innovation, clean code, and improving user experience.

I am eager to apply my technical expertise, attention to detail, and collaborative mindset to develop transformative solutions as part of Microsoft's world-leading engineering team. Thank you for considering my application.

Sincerely,

Vinit Onmalwar
